About the Fund

Portfolio Manager: Lazard Asset Management LLC

NYSE Symbol: LGI

First Day of Trading: 4/28/2004

Inception NAV: \$19.06

Inception Share Price: \$20.00

COMMENTARY

During December, the NAV return of Lazard Global Total Return & Income Fund rose 1.6%, slightly below the MSCI World Index return of 1.8%. For the year-to-date, the 26.9% return is below the Index gain of 30.0%. However, the since inception 5.6% annualized NAV return has outperformed the Index gain of 3.7%.

Global stocks rose during December, as the world continued to recover from the economic crisis, with the recent flow of positive economic data indicating continued improvement in the global economy. Investors were encouraged that policymakers signaled the likelihood of prolonged accommodative monetary policy. U.S. stocks performed well amid confidence that the economy appeared to be pulling out of recession, while European stocks were generally positive despite the increasing divergences within the EU and Greece's credit rating downgrade. In Asia, Japan continued to underperform, although it regained some positive momentum amid easing concerns over the strong yen. By sector, the information technology and materials sectors outperformed, while financials underperformed. The portfolio benefited from an overweight exposure to the information technology sector, while stock picking within the UK detracted from performance.

Performance for the smaller, short duration emerging market currency and debt portion of the Fund was up strongly in December and for the year-to-date. It has been a positive contributor to performance since inception.

1 Past performance does not guarantee future results. The NAV results are calculated using the Fund's Net Asset Value per share, and assumes reinvestment of all distributions. Periods greater than one year are annualized. The Fund's inception date was April 28, 2004.

2 Data is based on the Fund's holdings as of December 31, 2009, which are subject to change in the future. It is estimated that a significant portion of the distribution will constitute a return of capital.

INVESTMENT OBJECTIVE

The Fund's objective is total return, consisting of capital appreciation and current income. The Fund seeks to achieve its objective by primarily investing in a portfolio of approximately 35 – 45 equity securities with a market cap of \$5 billion or greater, at the time of purchase, that are domiciled in those countries that comprise the MSCI World IndexSM. It seeks enhanced income by investing in short duration (typically below one year) emerging market forward currency contracts and other emerging market debt instruments.

Regional Exposure

4 The securities identified should not be considered a recommendation or solicitation to purchase or sell these securities. It should not be assumed that any investment in these securities was, or will be, profitable.

5 Allocations are as of December 31, 2009 and are subject to change.

6 A measure of the average cash-weighted term-to-maturity of the investment holdings. Duration is a measure of the price sensitivity of a bond to interest rate movements. Duration for a forward currency contract is equal to its term-to-maturity.

7 The quoted yield excludes the implicit cost of borrowing on the forward currency contracts.

RISKS:

Past performance does not guarantee future results. Prices and yields will fluctuate with changes in market conditions. Distributions are subject to recharacterization for tax purposes after the end of the fiscal year. If the Fund pays distributions in excess of its net investment company taxable income, this excess would be a return of capital.

Risk factors include:

Investment and Market Risk. An investment in the Fund's Common Stock is subject to investment risk, including the possible loss of the entire principal amount invested. An investment in Common Stock represents an indirect investment in the Fund's portfolio investments. Their value, like other market investments, may move up or down, sometimes rapidly and unpredictably.

The Fund's Common Stock, at any point in time, may be worth less than the amount originally invested, even after taking into account the reinvestment of Fund dividends and distributions. The Fund's investment strategy includes purchasing investments that have embedded financial leverage, such as forward currency contracts, which magnifies the risk that you may lose money.

Leverage Risk. Using leverage is a speculative investment technique and involves certain risks. These include higher volatility of net asset value, the likelihood of more volatility in the market value of Common Stock and the possibility either that the Fund's return will fall if the interest rate on any borrowings rises, or that income will fluctuate because the interest rate of borrowings varies. If the market value of the Fund's portfolio declines, the leverage will result in a greater decrease in net asset value than if the Fund were not leveraged. Such greater net asset value decrease also will tend to cause a greater decline in the market price for Common Stock.

Non-U.S. Investments Risk. Global Equity investments will be in securities of foreign issuers operating in developed countries and will not include securities of emerging market issuers. These investments involve special risks, including the following: less publicly available information about non-U.S. issuers or markets because of less rigorous disclosure or accounting standards or regulatory practices; many non-U.S. markets are smaller, less liquid and more volatile; the economies of non-U.S. countries may grow at slower rates than expected or may experience a downturn or recession; and the impact of economic, political, social or diplomatic events.

Investing in sovereign debt securities will expose the Fund to the direct or indirect consequences of political, social or economic changes in the emerging market countries that issue the securities. Many of these countries are also characterized by political uncertainty or instability. The ability and willingness of sovereign obligors in emerging market countries or the governmental authorities that control repayment of their debt to pay principal and interest on such debt when due may depend on general economic and political conditions within the relevant country. Countries in which the Fund intends to invest have historically experienced, and may continue to experience, high rates of inflation, high interest rates, exchange rate fluctuations, trade difficulties and extreme poverty and unemployment.

The market values of corporate debt securities are sensitive to individual corporate developments and changes in economic conditions. Emerging market issuers may be highly leveraged and may not have more traditional methods of financing available to them. Therefore, their ability to service their debt obligations during an economic downturn or during sustained periods of rising interest rates may be impaired, resulting in a higher risk of default.

Currency Risks. An investment in Common Stock, as measured in U.S. dollars, may change significantly when the values of the emerging market local currencies change relative to the U.S. dollar, thereby subjecting investors to currency risks. The currencies of emerging market countries may experience significant declines against the U.S. dollar, and significant devaluation may occur subsequent to investments in these currencies by the Fund. Other risks include the dependence on the Investment Manager's ability to predict movements in exchange rates and imperfect correlations between movements in exchange rates. The Fund may use currency hedging transactions which might result in a poorer overall performance for the Fund than if the Fund had not engaged in any hedging transactions.

Currency Investments could be adversely affected by delays in, or a refusal to grant, repatriation of funds or conversion of emerging market currencies. Forward currency contracts are highly volatile, and a relatively small price movement in a forward currency contract may result in substantial losses to the Fund.

Please read the Prospectus carefully for more explanation of these and other risks.
