**About the Fund**

**Portfolio Manager:** Lazard Asset Management LLC

**NYSE Symbol:** LOR

**First Day of Trading:** 6/28/2005

**Inception NAV:** \$19.06

**Inception Share Price:** \$20.00

**COMMENTARY**

During June, the NAV return of Lazard World Dividend & Income Fund (the “Fund”) increased 0.3%, beating the MSCI All Country World Index, which was flat for the month. Over the last 3 months, the Fund’s NAV return of 0.6% is ahead of the Index, which fell 0.8%. Similarly, since inception, the Fund’s NAV has earned 19.3%, outperforming the Index return of 18.0%.

The sharp sell-off in global markets continued into early June before rebounding late in the month and ending roughly flat. The Fed raised the benchmark interest rate, for the 17<sup>th</sup> consecutive time in two years, to 5.25%, and hinted that the cycle of monetary tightening may be reaching a peak. Global investors are concerned that the Fed could be overly aggressive in its attempts to restrain inflation, potentially triggering a recession and sharp fall in corporate profitability. From a sector perspective, more-defensive sectors such as consumer staples, utilities, and telecom services, which are less affected by a slowing economy, held up well. Energy stocks also performed well, as the price of oil rose. Technology, consumer discretionary, industrials and materials, which are more sensitive to the economy, underperformed. Good stock selection within health care, consumer discretionary, and materials benefited performance, while unfavorable stock selection within the telecomm sector hurt performance.

The smaller, short duration emerging market currency and debt portion of the Fund was about flat for the month of June, but has been a moderate positive contributor to performance in 2006 and since inception.

<sup>1</sup> Past performance does not guarantee future results. The NAV results are calculated using the Fund’s Net Asset Value per share, and assumes reinvestment of all distributions. The Fund’s inception date was June 28, 2005.

<sup>2</sup> Data is based on the Fund’s holdings as of June 30, 2006 which are subject to change in the future.

## INVESTMENT OBJECTIVE

The Fund's investment objective is total return, through a combination of dividends, income, and capital appreciation. The Fund's net assets are invested in a portfolio of approximately 60-90 world equity securities, consisting primarily of the highest dividend-yielding stocks selected from the current holdings of other accounts managed by Lazard Asset Management. The equity portfolio is broadly diversified in both developed and emerging market countries and across the capitalization spectrum. The Fund seeks to enhance income by investing in short duration (typically less than one year) emerging market forward currency contracts and other emerging market debt instruments.

## SELECTED PORTFOLIO STATISTICS<sup>3 4</sup> – AS OF JUNE 30, 2006

<b>Top 10 Global Equity Holdings</b>	Dollar Value (\$mm)	Net Assets (%)	Dividend Yield (%)	<b>Global Equity Sector Weightings</b>	(%)
Bank of America	5.9	4.1	4.1	Consumer Discretionary	6.9

<sup>3</sup> The securities identified should not be considered a recommendation or solicitation to purchase or sell these securities. It should not be assumed that any investment in these securities was, or will be, profitable.

<sup>4</sup> Allocations are as of June 30, 2006 and are subject to change.

<sup>5</sup> A measure of the average cash-weighted term-to-maturity of the investment holdings. Duration is a measure of the price sensitivity of a bond to interest rate movements. Duration for a forward currency contract is equal to its term-to-maturity.

## RISKS:

---

Past performance does not guarantee future results.

Risk factors include:

**Investment and Market Risk.** An investment in the Fund's Common Stock is subject to investment risk, including the possible loss of the entire principal amount invested. An investment in Common Stock represents an indirect investment in the Fund's portfolio investments. Their value, like other market investments, may move up or down, sometimes rapidly and unpredictably.

The Fund's Common Stock, at any point in time, may be worth less than the amount originally invested, even after taking into account the reinvestment of Fund dividends and distributions. The Fund's investment strategy includes purchasing investments that have embedded financial leverage, such as forward currency contracts, which magnifies the risk that you may lose money.

**Small- and Medium-Capitalization Companies Risk.** Prices of securities of small- and medium-capitalization companies may be subject to more abrupt or erratic market movements than securities of larger, more established companies, because securities of small- and medium-capitalization companies typically are traded in lower volume and the issuers typically are subject to greater changes in earnings and prospects. In addition, securities of the smaller capitalization companies may be thinly traded (and therefore may have to be sold at a discount from current market prices or sold in small lots over an extended period of time) and may pose a greater risk of loss than investments in securities of larger capitalization companies.

**Leverage Risk.** Using leverage is a speculative investment technique and involves certain risks. These include higher volatility of net asset value, the likelihood of more volatility in the market value of Common Stock and the possibility either that the Fund's return will fall if the interest rate on any borrowings rises, or that income will fluctuate because the interest rate of borrowings varies. If the market value of the Fund's portfolio declines, the leverage will result in a greater decrease in net asset value than if the Fund were not leveraged. Such greater net asset value decrease also will tend to cause a greater decline in the market price for Common Stock.

**Non-U.S. and Emerging Markets Investments Risk.** Global Equity investments will be in securities of foreign issuers operating in developed countries and will not include securities of emerging market issuers. These investments involve special risks, including the following: less publicly available information about non-U.S. issuers or markets because of less rigorous disclosure or accounting standards or regulatory practices; many non-U.S. markets are smaller, less liquid and more volatile; the economies of non-U.S. countries may grow at slower rates than expected or may experience a downturn or recession; and the impact of economic, political, social or diplomatic events.

Particular risks of investing in emerging markets include: smaller market capitalization of securities markets; significant price volatility; restrictions on foreign investment; and possible seizure of a company's assets. In addition, foreign investors may be required to register the proceeds of sales. Future economic or political crises could lead to price controls, forced mergers, expropriation or confiscatory taxation, seizure, nationalization, or creation of government monopolies, all of which may affect currencies adversely.

Investing in sovereign debt securities will expose the Fund to the direct or indirect consequences of political, social or economic changes in the emerging market countries that issue the securities. Many of these countries are also characterized by political uncertainty or instability. The ability and willingness of sovereign obligors in emerging market countries or the governmental authorities that control repayment of their debt to pay principal and interest on such debt when due may depend on general economic and political conditions within the relevant country. Countries in which the Fund intends to invest have historically experienced, and may continue to experience, high rates of inflation, high interest rates, exchange rate fluctuations, trade difficulties and extreme poverty and unemployment.

The market values of corporate debt securities are sensitive to individual corporate developments and changes in economic conditions. Emerging market issuers may be highly leveraged and may not have more traditional methods of financing available to them. Therefore, their ability to service their debt obligations during an economic downturn or during sustained periods of rising interest rates may be impaired, resulting in a higher risk of default.

**Currency Risks.** An investment in Common Stock, as measured in U.S. dollars, may change significantly when the values of the emerging market local currencies change relative to the U.S. dollar, thereby subjecting investors to currency risks. The currencies of emerging market countries may experience significant declines against the U.S. dollar, and significant devaluation may occur subsequent to investments in these currencies by the Fund. Other risks include the dependence on the Investment Manager's ability to predict movements in exchange rates and imperfect correlations between movements in exchange rates. The Fund may use currency hedging transactions which might result in a poorer overall performance for the Fund than if the Fund had not engaged in any hedging transactions.

Currency Investments could be adversely affected by delays in, or a refusal to grant, repatriation of funds or conversion of emerging market currencies. Forward currency contracts are highly volatile, and a relatively small price movement in a forward currency contract may result in substantial losses to the Fund.

Please read the Prospectus carefully for more explanation of these and other risks.

## NOTES:

---

The information provided in this material should not be considered a recommendation to purchase or sell any security. There is no assurance that any securities referenced herein will remain in the Fund's portfolio or that securities sold have not been repurchased. The securities discussed may not represent the Fund's entire portfolio.

It should not be assumed that any of the referenced securities were or will prove to be profitable, or that the investment decisions we make in the future will be profitable.
